| Controlled Returns      | A freight movement from a sender to a StarTrack customer's warehouse, where the StarTrack customer is the receiver. Normally bill receiver.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Customer                | The StarTrack account holder.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| DC Book-in              | A delivery to a Retailer's Distribution Centre (DC) where a book-in date must be coordinated before completing a delivery.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Delivery Windows        | Only applicable to StarTrack's Home Delivery products, the nominated delivery time range (e.g. between 6pm and 9pm) if/when the receiver location allows.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Depot                   | A StarTrack facility.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Despatch ID             | An alpha-numeric identifier issued by StarTrack to a StarTrack customer. Used to uniquely identify each customer's warehouse(s) and/or freight.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Despatch Movement       | A freight movement from a StarTrack customer's warehouse to a receiver.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Despatch Summary Report | A paper document summarising a Despatch, prepared and signed by the Sender and collected by the Star Track Driver at Pickup. It includes the number of freight items; dimensions; cubic volume; date and the dangerous goods declaration, all where applicable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Deliver On Date         | Where a Commercial agreement is in place, the ability to nominate the date StarTrack should attempt delivery to the receiver. Please contact your StarTrack Account Manager for detail.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Dangerous Goods         | Any goods deemed of a dangerous or hazardous nature including but not limited to Goods which are or may become dangerous, inflammable, explosive, volatile or offensive (including radioactive materials) or Goods which are or may become liable to damage or injure any property or persons, whether you were aware of the dangerous or hazardous nature of the Goods or not, and includes, without limitation, goods forbidden, limited or restricted from time to time by:<br>a) the International Air Transport Association ("IATA");<br>b) the International Civil Aviation Organisation;<br>c) the Civil Aviation Safety Authority;<br>d) the Australian Dangerous Goods Code; or<br>e) any applicable law, regulation, guideline or requirement of a regulatory body or government of a country or territory from which, through which or into which the Goods are carried. |

| Term                         | Meaning                                                                                                                                                                                                                                                                                                                                                                                                                           |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Dangerous Goods Declaration  | A written form of declaration that declares whether airfreight consignments contain or do not contain Dangerous Goods, which complies with the IATA Regulations and is signed by the Sender or its authorised agent.                                                                                                                                                                                                              |
| DG                           | Refer to “Dangerous Goods”.                                                                                                                                                                                                                                                                                                                                                                                                       |
| DOD                          | Refer to “Deliver On Date.”                                                                                                                                                                                                                                                                                                                                                                                                       |
| Futile Pickup                | StarTrack has been unable to complete a successful pickup.                                                                                                                                                                                                                                                                                                                                                                        |
| GS1                          | GS1 is a neutral, not-for-profit, international organisation that develops and maintains standards for supply and demand chains across multiple sectors. Visit <a href="http://www.gs1.org">www.gs1.org</a> for details.                                                                                                                                                                                                          |
| I.A.T.A                      | International Air Transport Association. Visit <a href="http://www.iata.org">www.iata.org</a> for details.                                                                                                                                                                                                                                                                                                                        |
| Label Code                   | Is the human readable code that should be printed on the freight labels and used in the StarTrack Routing Barcode.                                                                                                                                                                                                                                                                                                                |
| LMF                          | See “ <a href="#">Location Master File</a> ”                                                                                                                                                                                                                                                                                                                                                                                      |
| Location Master File         | Previously known as the Postcode Master File, this file contains master data that must be referenced when creating labels and when using some StarTrack products. This includes (but is not limited to) the Depot Code for Express products, the Primary Port Code and Secondary Port Code for Premium products and indicators that define if a delivery location supports delivery windows and other location-specific features. |
| MOS                          | Modify-Own System – refers to StarTrack Customers that use their own internal systems to generate labels and send freight information to StarTrack systems.                                                                                                                                                                                                                                                                       |
| Notifications                | The ability for StarTrack to send SMS and/or email notifications to the receiver, triggered by particular tracking events. Surcharges may apply. Please contact your StarTrack Account Manager for details.                                                                                                                                                                                                                       |
| NZ                           | New Zealand.                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Packaging                    | Any container, packaging or pallet used for the purpose of containing and protecting the Goods for the purpose of the Service.                                                                                                                                                                                                                                                                                                    |
| Paperless Despatch Agreement | The StarTrack Paperless Despatch hardware and software Loan Agreement.                                                                                                                                                                                                                                                                                                                                                            |
| Pickup                       | The act of presenting freight to a StarTrack driver.                                                                                                                                                                                                                                                                                                                                                                              |
| Product Code                 | This is the alpha-numeric three character code used to indicate the StarTrack product. This code must appear in the electronic manifest (CLN) file and in the StarTrack Code 128 barcode number.                                                                                                                                                                                                                                  |
| RA Number                    | <b>Return Authority Number.</b> See “Authorisation Number”.                                                                                                                                                                                                                                                                                                                                                                       |
| Receiver                     | The person, organisation, business or company who receives Goods upon delivery by us.                                                                                                                                                                                                                                                                                                                                             |
| Sender                       | The person or legal entity that consigns Goods to StarTrack for the purposes of StarTrack providing transportation and/or warehousing services. The Sender may be StarTrack’s Customer or a third party.                                                                                                                                                                                                                          |
| Service                      | The whole of the carriage, operations and services we undertake for the Goods, including but not limited to the transportation and storage of the Goods.                                                                                                                                                                                                                                                                          |
| SSCC                         | Serial Shipping Container Code – a GS1 standard 20-digit unique number used to identify logistics units. Selected StarTrack Customers use SSCC as their unique Item Identifiers as opposed to using a StarTrack-issued ID.                                                                                                                                                                                                        |
| StarTrack Box                | Cardboard box with StarTrack branding, available for sale to all StarTrack customers with the intention of using the box with StarTrack’s “STB” Premium product. Designed to hold 1,3,5,10, & 20kg.                                                                                                                                                                                                                               |

| Term               | Meaning                                                                                                                                                  |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Successful Pickup  | When StarTrack has successfully taken custody of freight at the point of pickup.                                                                         |
| TA Number          | Transfer Authorisation Number. See “Authorisation Number”.                                                                                               |
| Transfer Movements | A freight movement between two parties where your warehouse is not the sender or the receiver. Normally the StarTrack customer is the third party payer. |

# Supported StarTrack Products & Features

StarTrack's *Modify Own System* solution may be used with the following StarTrack products. Before using these products, please consult your StarTrack Account Manager for detail.

| Product Group                                                                                                                     | Product Code | Product Name                   | Label Code | Features of Service                                                                        |     |                       |            |       |                |                     |                          |                        |                       |                      |

## StarTrack Delivery Locations & Routing Codes

Before creating consignments, generating labels and transmitting manifest data, StarTrack's Location Master File ("LMF") must be used to validate the delivery postcode and delivery suburb is supported by StarTrack.

The LMF also contains master data that must be referenced when creating labels and when using some StarTrack products. This includes (but is not limited to) the Depot Code for Express products, the Primary Port Code and Secondary Port Code for Premium products and indicators that define if a delivery location supports delivery windows and other location-specific features.

The LMF is based on the origin location. Therefore, you only need one Location.dat file when the freight is being despatched from one Australian ("AU") location. You will need a new and/or additional LMF if you ever re-locate the existing warehouse or open an additional warehouse in a location, respectively. You will also need a New Zealand ("NZ") Location Master File if/when consigning freight from Australia to New Zealand using a valid Premium product.

Please contact your Australia Post StarTrack Account Manager for the LMF.

### Location Master File (AU Domestic)

The Australian Location Master File (LOCATIONS.DAT) is a text file with fields of a fixed length. Records are delimited by a carriage return and line feed pair. Previously referred to as the Postcode Master File, this file consists of the following fields:

| #  | Field Name                          | Position | Length | Description                                                                                                                                                                                                                                                                                                                                                                                                          |

| 15 | Lead Time PRM                           | 63       | 2      | The number of transit days (business days) to this location for PRM products (right justified).                                                                           |

Notes:

- Field 03 (Suburb Name) is the primary key of our main Postcode Master File and is made unique in combination with the postcode (field 01).
- Fields 05-07 are some of the fields commonly used to calculate freight charges.

## Location Master File (NZ)

The New Zealand Location Master File is a comma separated text file that consists of the following fields:

| #  | Field Name  | Length | Description                                      |
|----|-------------|--------|--------------------------------------------------|
| 01 | Suburb Name | 21     | The name of the NZ Suburb                        |
| 02 | City Name   | 20     | The name of the NZ City.                         |
| 03 | Postcode    | 4      | The NZ postcode for the suburb/town combination. |

## Generating Consignment Note Numbers

Allocation of consignment note numbers is an important consideration. Consignment note numbers must never be duplicated, either for the same customer or across different customers. This situation is avoided by allocating a "Despatch ID" to uniquely identify each customer (and preferably to each despatch site if a customer has multiple despatch sites).

Consignment note numbers must be 12 characters long and are in the format:

"XXXZ99999999" where:

|            |                                                                           |
|------------|---------------------------------------------------------------------------|
| "XXXZ"     | The four character alpha/numeric Despatch ID issued by StarTrack.         |
| "99999999" | An eight digit number which is incremented for each new consignment note. |

## Consignment Note Consolidation Rules

A consignment note is a group of one or more orders travelling on the same day from the same despatch point on the same service to the same receiver with the same delivery instructions.

There are specific rules governing certain types of orders or packages and whether they can be consolidated. Consolidation will not occur in the following situations:

- The Connote is deemed to be an individual connote (this would need to be controlled by the customers system).
- The Unit type is Satchel or the service has fixed weight limits (all fixed price services with fixed weight limits must only have a single item per consignment).
- The StarTrack product does not allow connote consolidation. Please refer to the section entitled *Supported StarTrack Products & Features* for detail.

A new order can consolidate onto an existing connote if the following conditions are met:

- The connote has not been closed by the customers system.
- Receiver Details match (Name, Address, Location, Country and Account).
- Despatch Date of Connote <= Order despatch date.
- Same Carrier (e.g. StarTrack).
- Same Service (e.g. EXP (Express)).
- Same Payer Account.
- Same Insurance class
- Dangerous Goods details must match exactly. You cannot mix different classes by law.
- Maximum number of different unit types per connote cannot exceed 12 (e.g. CTN, PAL, BOX, CON).
- Special Instructions must match.
- The ATL option must match.

# Barcode Specifications

## Freight Item Barcode

Previously known as an article- or label- barcode, this mandatory element provides the ability to uniquely identify and recognise each distinct piece of freight and relate each item back to its consignment.

StarTrack systems are designed to recognise two barcode formats:

- StarTrack Code 128 format  
→ for all AU Domestic consignments.
- UCC/EAN-128 SSSC format  
→ for SSSC customers and all consignments destined to NZ using a valid StarTrack Premium product.

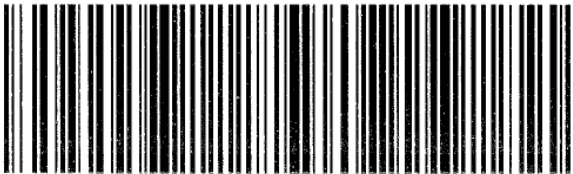

Barcodes must comply with one of the following specifications and be of high quality to ensure accurate reading. Barcodes must be read at high speed and through a range of "field depths". Large items will be scanned from as close as 1000mm and small items will be scanned from as far away 1700mm, i.e. the distance from the scanner head to the conveyor surface.

Sample barcodes must be tested and approved by StarTrack prior to full scale production. For further details, please contact your Australia Post StarTrack Account Manager or the StarTrack E-Business team.

Label stock must be white (no colour background) and of a matt texture (non-glossy).

Printers should also be re-calibrated on a regular basis to ensure optimal print quality.

## 1) StarTrack Code 128 format

| StarTrack Code 128 20-Character Freight Item Barcode |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

## 2) UCC/EAN-128 SSCC format

This barcode format is preferred by many clients because it conforms to international supply chain standards.

SSCC barcodes are often incorporated in the standard label format of major Australian retailers. Although some enhancement is usually necessary to incorporate StarTrack requirements, this approach can eliminate the need to produce 2 different labels for each carton shipped to major retailers. Please note that any modification to the SSCC label format for major retailers often requires their approval prior to production.

If you are planning to use SSCC barcodes for domestic consignments within Australia, please ensure your GS1 Company Prefix is supplied to StarTrack prior to testing.

SSCC barcodes must be used for all consignments destined to New Zealand using a valid StarTrack Premium product. A StarTrack-issued GS1 Company Prefix and range must be used for these consignments. These will be provided to you by the StarTrack IT Service Desk. You will need to implement additional logic to track the usage of the range so that when the range limit is reached – StarTrack IT Service Desk or your StarTrack Account Manager will be contacted for a new range to be used before despatching any additional international freight.

| GS1 UCC/EAN-128 SSCC format Barcode    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

## Sortation Barcodes

To assist StarTrack when manifest data is late or missing, an approved sortation barcode must be included on the label. The two supported barcode formats are:

- 1) The [StarTrack Routing Barcode](#) for AU domestic labels and items destined to NZ.
- 2) [GS1 421 Routing Barcode](#) for AU domestic SSCC labels only.

Detail on each follows.

## 1) StarTrack Routing Barcode

| StarTrack Routing Barcode                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

## StarTrack 2D QR Barcode

StarTrack's 2D QR barcode must appear on all labels. To ensure compatibility with StarTrack scanning technology, the QR Barcode must be configured to the following specification.

| StarTrack 2D QR Barcode |                                                                                   |

| 22      | Not After Date            | YYYYMMDDHHMM  | 303      | 12     | Optional    | If declared, must be >= [Not Before Date]                                                                                                                                                                                                                                                                                                                                |
| 23      | ATL Number                | Alphanumeric  | 315      | 10     | Conditional | Required when the Authority to Leave (ATL) feature has been selected. Please refer to the section entitled <i>StarTrack Authority To Leave (ATL) Barcode</i> for detail.                                                                                                                                                                                                 |
| 24      | RA Number                 | Alphanumeric  | 325      | 10     | Conditional | Mandatory for Controlled Returns & Transfer Movements only. User defined value.                                                                                                                                                                                                                                                                                          |

## StarTrack Authority To Leave (ATL) Barcode

For selected services (refer to the section entitled *Supported StarTrack Products & features of service*) there is also the ability to give StarTrack the authority to leave the goods should the receiver not be available to sign. This option is enabled by printing an additional barcode on the freight label.

### StarTrack ATL Barcode

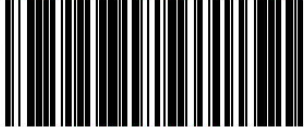

|                                     |                                                                                                                                                                                                                                                                                                                                                                        |
|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Barcode Example                     | <br>C000000039                                                                                                                                                                                                                                                                        |
| Compression                         | <p>A mixture of Code B (alpha/numeric) and Code C (numeric only) character sets. The first two characters are coded using Code B, the following 8 characters use Code C.</p> <p>An example in Zebra Code of the field data portion is:<br/>FD&gt;:C0&gt;500000001^FS</p> <p>Where the codes "&gt;:" and "&gt;6" select Code B and the code "&gt;5" selects Code C.</p> |
| Barcode Content                     | <p>Is in the format "C999999999" where:</p> <ul style="list-style-type: none"> <li>C:<br/>is an alpha/numeric value which is always the character "C".</li> <li>999999999:<br/>is a numeric value which represents a sequential counter starting from the value 000000001 and incrementing by one for each consignment that requires an authority to leave.</li> </ul> |
| Preferred Orientation               | "Picket Fence"                                                                                                                                                                                                                                                                                                                                                         |
| Minimum Bar Height                  | 10mm                                                                                                                                                                                                                                                                                                                                                                   |
| Minimum Barcode Length              | 28mm                                                                                                                                                                                                                                                                                                                                                                   |
| Minimum Quiet Zone (left and right) | 5mm                                                                                                                                                                                                                                                                                                                                                                    |
| Resolution                          | 6 dots per mm                                                                                                                                                                                                                                                                                                                                                          |

#### NOTES:

- When a consignment has multiple freight items (pieces), only a single ATL code is required for the consignment. This single ATL code must be presented on all labels that make up the consignment.
- The allocated range is specific to the despatch ID for that account.

# StarTrack Label Formats

## 1. StarTrack Despatch Label

|                                                                |                                                                                                                                                                                                                                                                                 |                             |

- This label is the standard label for StarTrack domestic services when freight is moved from your warehouse to a receiver.
- When using a single label to support StarTrack requirements and your pick and pack process, please use a label that is 20cm in height. The first 15cm starting from the top of the label must be used for StarTrack. The remaining 5cm may be used for your warehouse requirements.
- StarTrack International Customers will also be expected to use this label format for International (AU) Inbound freight where StarTrack Domestic will perform the last-mile delivery once the freight has arrived in Australia and cleared Australian Customs.
- Label stock must be white. That is, the label should not have a colour background.
- Printers should also be re-calibrated on a regular basis to ensure optimal print quality.

- This label must be used when consigning Controlled Returns and Transfer Movements within the StarTrack Domestic Network.
- Label stock must be white. That is, the label should not have a colour background.
- Printers should also be re-calibrated on a regular basis to ensure optimal print quality.

- The StarTrack Despatch Label will also be used as the standard layout for SSCC Retailer Customers though labels will contain a SSCC Barcode as the Article Identifier and if required, a GS1 Routing Barcode (instead of the StarTrack routing barcode).
- Consignments destined to New Zealand using a valid StarTrack Premium product must use this label format. Please refer to the section entitled *Supported StarTrack Products & Features* for detail.
- SSCC barcodes may only be used for despatch movements.
- When using a single label to support StarTrack requirements and your pick and pack process, please use a label that is 20cm in height. The first 15cm starting from the top of the label must be used for StarTrack. The remaining 5cm may be used for your warehouse requirements.
- SSCC Retailers may have other non-standard label requirements. Any variations to the StarTrack label format must be reviewed and approved by StarTrack before go-live. Please contact your StarTrack Account Manager or E-Business Specialist for further detail.
- Label stock should be white. That is, the label should not have a colour background.
- Printers should also be re-calibrated on a regular basis to ensure optimal print quality.

# Despatch Summary & Controlled Returns/Transfer Movement Summary

The Despatch Summary and Controlled Returns/Transfer Movement Summary documents provides signed evidence of the respective pick-up including the freight quantity and a dangerous goods declaration.

If a mixture of Express and Premium freight is being consigned, then a separate Summary is required for the road (Express products) and air (Premium products) consignments. The sender must retain a copy of all Summaries generated.

Important note: Consignments containing DG must be called-out/itemised on the Despatch Summary, in addition to the DG paperwork that we expect accompanying the consignments.

# Dangerous Goods Document

Transport of Dangerous Goods consigned by road or by air are restricted and must comply with the following statutory regulations:

- Transport of Dangerous Goods consigned by “road” must comply with the National Transport Commission (Model Legislation – Transport of Dangerous Goods by Road and Rail) Regulations 2007 under the National Transport Commission Act 2003 and the Australian Dangerous Goods Code, 7.3 Edition.
- Transport of Dangerous Goods consigned by “air” must comply with the “International Air Transport Association (IATA) Dangerous Goods Regulations”.

## Air Requirements

Customers are reminded that Dangerous Goods consigned under one of StarTrack’s Premium services may travel by Air. It is the customer’s responsibility to ensure that all packaging and labelling complies with the current edition of the IATA Dangerous Goods Regulations, and that the freight is accompanied by a signed Dangerous Goods Declaration, available from [IATA](http://www.iata.org/whatwedo/cargo/dgr/Pages/shippers-declaration.aspx) (<http://www.iata.org/whatwedo/cargo/dgr/Pages/shippers-declaration.aspx>).

As per appropriate Section II of the IATA packing instructions, customers consigning “air” goods containing Lithium batteries with UN numbers 3480/3481/3090/3091 in sufficiently small quantities, are not required to identify the consignment as a ‘Dangerous Good’ in the StarTrack manifest. It is the responsibility of the customer to accurately assess whether the exemption applies, and to appropriately package and identify the freight in accordance with the regulations.

## Road Requirements

The [Dangerous Goods Transport Document](#) must be signed and attached to the consignment. A copy of the [Dangerous goods Transport Document](#) must be retained by the sender. The following is a sample of the document.

## Sample Dangerous Goods Transport Document

# DANGEROUS GOODS TRANSPORT DOCUMENT

(for Road/Rail only)

# EXP
